

IMPACT OF LIFESTYLE ON ACADEMIC PERFORMANCE

Malak Khaled
Ali Walid
Arwa Ayman
Hana Kamal

What if everything you believe about studying is wrong?

More stress = higher GPA?
Sleep doesn't matter as much as we think?

OBJECTIVE

To analyze how lifestyle factors affect GPA, including:

Study Hours
Sleep
Stress
Physical Activity
Social Life

Research Questions

Is there a relationship between lifestyle and GPA?

Does exercise help?

What is the strongest predictor of GPA?

Does sleep improve performance?

HYPOTHESIS

H_0 (Null Hypothesis):

Lifestyle has no effect on GPA

H_1 (Research Hypothesis):

Better lifestyle → Higher GPA

KEY RESULTS

Study hours show a strong positive correlation with GPA
Students who study more consistently achieve higher performance
Sleep shows only a weak relationship with GPA

STRESS RESULT

Unexpected Finding

Students with higher stress levels tend to have higher GPAs
 This contradicts the common belief that stress reduces performance.
 explanation: pressure may increase motivation and focus

Conclusion

- Lifestyle habits significantly impact academic performance
- Study hours are the strongest predictor of GPA
- Stress has a complex and unexpected effect
