

The Analysis of The Impact of Lifestyle on Academic Performance

Introduction

- ✓ Academic performance is influenced by various lifestyle factors beyond traditional study habits.
- ✓ This study examines the relationship between lifestyle habits and GPA among university students.
- ✓ Dataset comprises 2000 student samples sourced from Kaggle for comprehensive analysis.

Research Objectives

- ✓ To analyze the correlation between study hours, sleep, and GPA.
- ✓ To examine the impact of stress levels, physical activity, and social engagement on academic outcomes.
- ✓ To determine if lifestyle habits significantly influence academic performance.

Research Question

Is there a relationship between lifestyle habits and academic performance?

Method

Data Source

Kaggle dataset with 2000 student samples analyzed using statistical methods.

Variables

GPA, study hours, sleep hours, stress levels, physical activity, social engagement.

Analysis

Correlation analysis between lifestyle variables and GPA.
Hypothesis testing to determine significance.
Data visualization and statistical modeling.

Course

Data Analysis Course,
Computer and Information Systems

Results & Discussion

Positive Correlations

Study Hours

Students who dedicate more hours to studying consistently demonstrate higher GPA scores.

Sleep Hours

Adequate sleep shows positive correlation with academic performance and GPA improvement.

Complex Relationships

Stress Levels

Stress exhibits a complex, non-linear relationship with academic performance outcomes.

Lifestyle Factors

Physical activity and social engagement contribute to overall student wellbeing and focus.

Key Findings

The null hypothesis was rejected - lifestyle factors significantly influence academic outcomes.

Statistical analysis confirms that balanced lifestyle habits contribute to better academic performance.

Implications

Balancing study time with adequate rest is crucial for optimal academic performance.

Students should prioritize sleep hygiene and stress management alongside their study schedules.

Recommendations

Universities should promote healthy lifestyle habits through wellness programs and student support services.

Academic advisors should consider lifestyle factors when counseling students on performance improvement.

Conclusion

- ✓ Lifestyle habits DO have a significant impact on academic performance. The null hypothesis was rejected.
- ✓ Study hours and sleep show positive relationships with GPA, while stress has complex effects.
